PAPER

Please find below and/or attached an Office communication concerning this application or proceeding.

The time period for reply, if any, is set in the attached communication.

Office Action Summary

Application No.

10/646,429

Applicant(s)

BILLMERS ET AL.

Examiner

Lien T. Tran

Art Unit

1794

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period **will** apply and **will** expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply **will**, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 10 April 2008.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-8 and 10-22 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1-8, 10-22 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
2. ☐ Certified copies of the priority documents have been received in Application No. _____.
3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

Attachment(s)

- 1) ☐ Notice of References Cited (PTO-892)
- 2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
- 3) ☐ Information Disclosure Statement(s) (PTO/SB/08)
Paper No(s)/Mail Date _____.
- 4) ☐ Interview Summary (PTO-413)
Paper No(s)/Mail Date: _____.
- 5) ☐ Notice of Informal Patent Application
- 6) ☐ Other: _____.

Art Unit: 1794

Claims 1,10,11 and 12 are rejected under 35 U.S.C. 102(b) as being anticipated by Bell et al. and Mizoguchi et al.

Bell et al disclose a fried composition comprising a food portion and a batter containing starch that has been cross-linked with succinic anhydride. The batter adheres directly on the food portion. The food portion includes chicken, fish, fruit etc.. (see col. 2 lines 20-25, col. 3 line 14, col. 7 lines 15-20, col. 8 lines 13-14).

Bell et al disclose coating food composition with starch succinate; thus, it is inherent the food will have the claimed reduction of fat content as claimed. Bell et al are silent as to whether the starch succinate is an ester. Mizoguchi et al in a process of making processed starch disclose that examples of esterifying agents useful for preparing cross-linked starch esters are acetic anhydride, succinic anhydride etc.. Bell et al disclose cross-linking with succinic anhydride; thus the starch in Bell et al is a starch succinate ester as evidence by Mizoguchi et al.

Claims 2-6 are rejected under 35 U.S.C. 103(a) as being unpatentable over Bell et al in view of Richards et al.

Bell et al do not teaching converting the starch, the water fluidity and the amount of succinic anhydride.

Richards et al teach a method of making lipophilic starch derivative for use at coating material. The process includes the steps of esterification of the starch with n-octenyl succinic anhydride. The amount of anhydride used is generally from about .1-10%. The esterified starch is converted by enzyme treatment to decrease the viscosity of the starch suspension. (see col. 2 lines 60-68, col. 3 lines 30-40)

Art Unit: 1794

It would have been obvious to one skilled in the art to convert the starch in the Bell et al process as taught by Richards et al when desiring to obtain a starch suspension having low viscosity. For example, when desiring only a thin film of starch on the food portion instead on thicker layer of a batter, it would have been obvious to have a starch suspension with low viscosity. The amount of water fluidity depends on the viscosity desired and this is a result-effective variable which can readily be determined by one skilled in the art. It would have been obvious to vary the amount of succinic anhydride depending on the degree of cross-linking desired. Since the starch is used for coating, it would have been obvious to one skilled in the art to follow the guide line in the amount used as taught by Richards et al.

Claims 8, 13-22 are rejected under 35 U.S.C. 103(a) as being unpatentable over Bell et al in view of Wu et al.

Bell et al do not disclose potato product, adding another starch and the processing steps as in claims 14 and 20.

Wu et al disclose a process for coating potato strips. The process includes the steps of blanching the potato, treating the potato in sodium chloride solution, and coating the potato with starch solution. Wu et al teach adding different type of starch in addition to the main starch component. (see col. 3 and col. 5 lines 63-67)

Bell et al disclose other products can be coated; thus, it would have been obvious to coat potato product when desiring crisp coating on such product. When the food product being coated, it would have been obvious to one skilled in the art to process the potato according to conventional method as disclosed by Wu et al. It would

Art Unit: 1794

also have been obvious to add another starch to the batter of Bell et al to obtain different flavor, texture, viscosity etc.. Adding combination of starches in coating composition is known as shown by Wu et al. It would have been obvious to one skilled in the art to determine the appropriate amount of starch to obtain the most optimum product. This can readily be determined through routine experimentation. It would have been obvious to add the starch to the blanching water when the food portion is treated in the blanching water because this will save a separate coating step. Blanching the food in the water will cause any component in the water to adhere to the food. It would have been obvious to reconstituting the product by frying or oven heating depending on the texture desired. Frying will give a crispier texture.

Claims 1, 2 and 7 are rejected under 35 U.S.C. 103(a) as being unpatentable over Shi et al (US2003/0099744).

Shi et al disclose a food composition comprising a food portion and a coating comprising starch succinate that is converted. The starch can be a pregelatinized starch. (see paragraphs 0015, 0017, 0024, 0040)

Shi et al do not disclose the food composition is a fried composition.

It would have been obvious to one skilled in the art to make a fried composition when wanting food having different texture and flavor. Both baking and frying are well known cooking process in the art and the selection of which depends on the fat content, calorie content, taste, texture, flavor etc.. wanted.

In the RCE filed 4/10/08, applicant submits a declaration for consideration. The declaration is not found to be persuasive to overcome the rejection. The declaration

Art Unit: 1794

states that Bell's preferred reagent is phosphorus oxychloride which only crosslinks.

This statement does not take into account the full teaching of Bell. While Bell's preferred reagent may be phosphorus oxychloride, Bell also discloses the reagent can be succinic anhydride which gives crosslinked-starch ester which is the claims are directed to. The declaration states the difference between crosslinked starch ester and substituted ester; however, the difference is not a point to consider. The claims only require that the starch be a succinate ester and this is what Bell discloses. There is no limitation on the starch being a substituted starch, processing parameters between substituted starch and crosslinked starch or any properties of the starch. Thus, the declaration is not commensurate in scope with the claims.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Lien T. Tran whose telephone number is 571-272-1408. The examiner can normally be reached on Monday-Thursday.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Milton Cano can be reached on 571-272-1398. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
